

User Stories to test code imported:

The screenshot shows a VS Code editor with the following components:

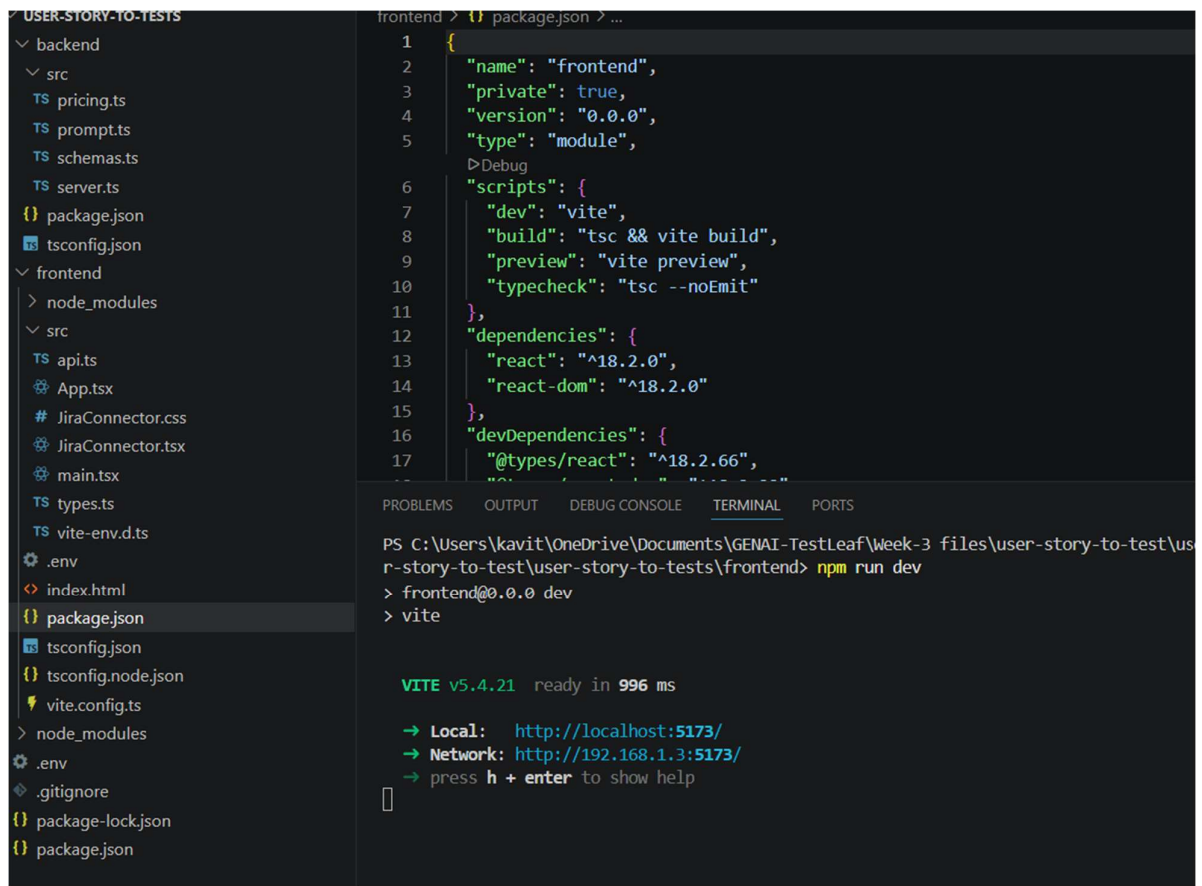

- File Explorer (Left):** Displays the project structure under 'USER-STORY-TO-TESTS'. The 'backend' folder is expanded, showing 'src' with files like 'pricing.ts', 'prompt.ts', 'schemas.ts', 'server.ts', 'package.json', and 'tsconfig.json'. The 'frontend' folder is also expanded, showing 'node\_modules' and 'src' with files like 'api.ts', 'App.tsx', 'JiraConnector.css', 'JiraConnector.tsx', 'main.tsx', 'types.ts', and 'vite-env.d.ts'. Other files like '.env', 'index.html', 'package-lock.json', and '.gitignore' are also visible.
- Editor (Center):** Shows the 'package.json' file for the 'frontend' directory. The content is as follows:

```
1 {
2   "name": "frontend",
3   "private": true,
4   "version": "0.0.0",
5   "type": "module",
6   "scripts": {
7     "dev": "vite",
8     "build": "tsc && vite build",
9     "preview": "vite preview",
10    "typecheck": "tsc --noEmit"
11  },
12  "dependencies": {
13    "react": "^18.2.0",
14    "react-dom": "^18.2.0"
15  },
16  "devDependencies": {
17    "@types/react": "^18.2.66",
18    "typescript": "^5.0.0"
19  }
20 }
```
- Terminal (Bottom):** Shows the command 'npm run dev' being executed in the 'backend' directory. The output indicates that the environment variables are loaded, the port is 8091, and the backend server is running on port 8091. The API is available at 'http://localhost:8091/api' and a health check is performed at 'http://localhost:8091/api/health'. The Groq API key is configured successfully.

Backend Terminal:

Frontend Terminal:

Previously in the screenshot shown below, just Generate Tests could be found which generates test cases using User Story details provided manually:

localhost:5173

Jira Connector

Story Title \*

User Story: HC-287 – Dynamic Queue List of AHC (Enhanced Real-Time Filtering)

Description

The existing queue currently loads patient lists only once when the dashboard is opened. The new enhancement adds real-time auto-refresh logic and introduces dynamic filters for patient priority and status ("Waiting", "Under Examination", "Discharged"). The update ensures that queue order and color coding change instantly when the patient status changes in the system.

Acceptance Criteria \*

Given the doctor dashboard is open, when a patient status changes in the system, then the queue list should update automatically within 30 seconds.

Given the doctor wants to view only critical patients, when the "Emergency" filter is applied, then only patients with critical priority should be visible.

Given the queue is auto-refreshed, then the UI should retain scroll position and active filters without manual reload.

Additional Info

Any additional information (optional)...

Generate

Currently Jira Connector implemented using Github Copilot which could take User Story details directly:

localhost:5173

Generate comprehensive test cases from your user stories
